# Sight Conservation Program Lesson Guide #3

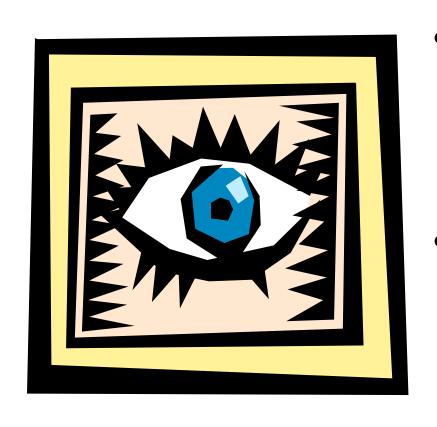

## OBJECTIVES: Upon completion of this topic, you will be able to:

- Identify the elements of the Navy's sight conservation program.
- Define a sight hazard and describe how they are marked or identified.
- Describe the various types of eye protection.

### Background

 Eye injuries cost industry \$300 million each year in compensation and lost work time. The loss of sight can be devastating and is easily preventable. The Navy has a Sight Conservation Program to identify eye hazardous situations, to post those hazards, and provide personal eye protection.

#### Your Eye's Defenses

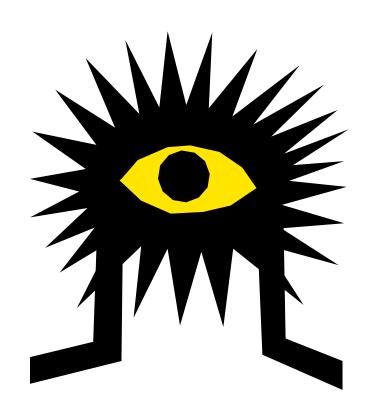

- Tears self-clean the eyes of foreign materials and irritants.
- The eye lid is a physical barrier to foreign materials, but not sharp objects.

### Types of Eye Injuries

- Foreign Bodies
  - Abrasions

- Contusions

Irritation from particles

### Types of Eye Injuries

- Chemical Burns
  - Gases
  - Acids
  - Alkalies
  - Vapors

### Types of Eye Injuries

- Radiation burns
  - Infrared light
  - Ultrviolet light
- Laser

### Navy Sight Conservation Program Elements

- 1. Identify eye hazardous areas.
- 2. Eliminate eye hazards.
- 3. Post eye hazardous areas
- 4. Provide protection

# Eye Protection & Personal Protective Devices

- Must meet American National Standards Institute manufacturing standards,
  - ANSI Z87 or Z87.1 must be stamped on glasses

### Eye Protection & Personal Protective Devices

- Each style / type is designed for a specific hazard.
  - Safety or impact glasses
  - chemical splash goggles
  - impact or chipping goggles
  - UV protection welding helmets
  - welding goggles and face shields

### Eye Protection & Personal Protective Devices

- Each style / type is designed for a specific hazard (*continued* )
  - Laser radiation
  - Plano
  - Prescription

#### Eye Protection

- When handling strong acids / alkalais, double eye protection is required.
- Face shields must be worn with safety glasses or goggles.
- When working around ultraviolet light (welding or burning), protection is selected for the level of intensity.

### Eye Protection (continued)

- The Navy will provide prescription safety glasses, if needed for the job.
- Regular prescription glasses cannot be worn as safety glasses. Shatter resistant glasses could still cause damage to the eyes from impact accidents.

### Emergency Eyewash Stations

- Must meet ANSI Standards
- First aid is flushing eyes with fresh water for 15 minutes
- Flushing is used to dilute strong chemicals
- Required where corrosives are used
  - Battery lockers

#### Screening Examinations

- All personnel exposed to eye hazardous areas/operations shall be scheduled for sight screening examinations.
- Records of evaluation shall become part of an employee's permanent medical file.
- Eye wear shall be properly fitted.
- OSH offices will determine proper procurement procedures.

### Maintenance of Eyewear

- Responsibility of wearer
- Supervisor enforce wearing and maintenance
- Report damage or loss to supervisor

### Temporary Protective Eyewear

- Planos (non-prescription glasses) or goggles shall be provided to employees waiting delivery of corrective protective wear.
- Temporary eye wear must also be provided to visitors in eye hazardous areas.

### Training

- A training program on the need for and use of protective eyewear shall be conducted at all activities.
- Training must include jobs requiring eye protection, location of nearest eyewash station, and simple first aid measures.

#### Responsibilities

- Activity OSH offices shall determine eye hazardous areas, occupations and processes.
- The servicing medical facility shall provide sight screening examinations and refractive services.

### Responsibilities (continued)

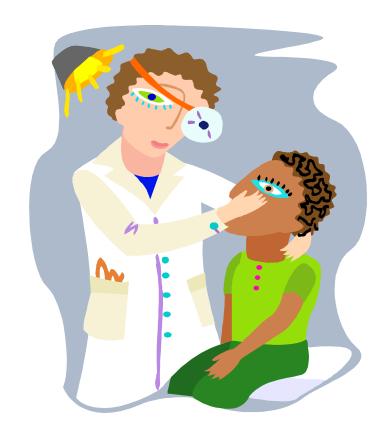

- User/Worker Wear provided protective eye wear where required.
- Comply with eye hazard signs.
- Undergo vision testing, as required.
- Maintain protective eyewear in a clean and sanitary condition

### Eye Injury First Aid

- Never rub the eyes to remove particles or if eyes are irritated.
- For chemical burns, flush with fresh, cool water for a full 15 minutes, then report to medical.
- For punctures and eye trauma, cover both eyes gently with a soft cloth and get medical treatment.

### Eye First Aid (Continued)

 Report all minor cuts and eye problems to medical treatment facility. A minor scratch could lead to an eye infection possibly causing scar tissue and loss of sight.

#### Review and Summary

 There are many processes and work situations which are a potential hazard to the eyes. Frequent minor mishaps are corneal abrasions and particles in the eye. Many non-industrial jobs, such as dusting overheads, can also be hazardous and may require eye protection. Always remember, your sight is worth more than a few minutes of your time to put on proper eye wear.
